## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-63, 80 and 89 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method for hierarchically encrypting media data to prevent from gaining access to the entire media data. Each independent claim recites the uniquely distinct features of "generating an (N+1)-th layer key by applying the generated N-th layer key to a predetermined function; and encrypting N-th layer media data using the N-th layer key, and encrypting (N+1)-th layer media data using the generated (N+1)-th layer key". The closest prior art, Ishiguro (EP 768 774), discloses a method of generating hierarchical keys but fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
